

Laporan Pertemuan 4

I. Alur Kerja

Sistem pelanggan pusat perbelanjaan "BelanjaRek":

1. Customer (Pelanggan Biasa) - nama, ID, total belanja
2. Member (Pelanggan Premium) - tambahan poin reward, level

Desain Class:

Class Customer (Parent)

- nama: String (protected)
- idCustomer: String (protected)
- totalBelanja: int (protected)

Class Member (Child extends Customer)

- poinReward: int (tambahan)
- levelKeanggotaan: String (tambahan)

II. Fungsi - Fungsi yang Digunakan

1. Constructor Customer

Customer(String nama, String idCustomer, int totalBelanja)

Inisialisasi data pelanggan dasar

2. Constructor Member dengan super

Member(String nama, String idCustomer, int totalBelanja, int poinReward, String levelKeanggotaan)

Memanggil super(), lalu inisialisasi atribut Member

3. tampilkanInfo() dengan super.method()

@Override

```
void tampilkanInfo() {  
    super.tampilkanInfo();  
}
```

III. Hasil Output Program

```
=== DATA CUSTOMER BELANJAKU ===  
Status: Customer Biasa  
Nama: Budi Santoso | ID: CST-001 | Total Belanja: Rp 500000  
  
Status: Member  
Nama: Siti Aminah | ID: MBR-110 | Total Belanja: Rp 1250000  
Poin Reward: 240 | Level: Gold
```
